LATERAL BUCKLING PROBLEMS IN HOISTING AND
ERECTION OF SLENDER BEAMS. [Foreign literature
study no. 322]. [1961] [36]p. (1 fig. omitted) 30 refs.
Order from SLA m\$3.00, ph\$6.30 61-10805

Trans. of Nordisk Betong (Sweden) 1960 [v. 4] no. 3
[p. 231ff].

The basic equation is presented for the angle of rotation Φ in the position of equilibrium involving a spatial deflection which is associated with lateral buckling. This equation, which is valid on the assumption that the material is elastic and homogeneous, is solved to determine the lateral buckling load on a beam which is suspended by means of ropes, and which is acted on by dead load, in the following cases: (a) beam with cross-section which is constant and free to warp; (b) beam with a cross-section which is free to warp and varies linearly in depth; and (c) beam with cross-section which is constant, monosymmetrical, and not free to (Engineering--Civil, TT, v. 5, no. 12) (over)
